DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on June 30, 2009 has been entered.

EXAMINER'S AMENDMENT

It is noted that the Examiner's Amendment from the previous Notice of Allowance mailed June 2, 2009 still stands.

Allowable Subject Matter

It is noted that present claims 1, 3-6 and 11-28 were previously allowed as set forth in the Notice of Allowance mailed June 2, 2009,

In light of filing a proper RCE on June 30, 2009, prosecution of pending claims 1, 3-6 and 11-28 was reopened.

It is noted that present claims 1, 3-6 and 11-28 remain allowable over the closest prior art of record Senda et al. (US 5,990,417) for the reasons of record as set forth in the Notice of Allowance mailed June 2, 2009 and restated below.

The following is an examiner's statement of reasons for allowance:

Applicants claim an electronic noise suppressor comprising a base material containing a binding agent and a composite layer having a thickness of 0.005 to 0.3 microns. The composite layer consists of the binding agent and magnetic material and consists of a portion with binding agent and crystals of the magnetic material, a portion with binding agent only and a portion with binding agent and non-crystallized magnetic material. The composite layer is formed by physical vapor deposition with particle energy in the range from 5 to 100 eV.

The closest prior art of record Senda et al. (US 5,990,417) teaches crystallized magnetic material in a binding agent, but does not teach or suggest the other portions of the composite layer or the thickness of the composite layer. Senda also does not teach the particle energy of the vapor deposition. This energy determines the structure of the composite layer.

Further, due to the filing on 5/18/09 and approval of a Terminal Disclaimer, the nonstatutory obviousness-type double patenting rejection over copending Application No. 10/538,132 is withdrawn.

It is further noted that given that this application was in condition for allowance except for the presence of claims 29-44 directed to an invention nonelected without traverse, claims 29-44 were cancelled by examiner's amendment as set forth in the Notice of Allowance mailed June 2, 2009.

Further, Applicant's IDS filed June 30, 2009 has been considered. The present claims are allowable over the references presented.

The Japanese Office Actions are directed to broader claims than those of the instant application. All documents presented in the International Search Report for PCT/JP2004/002104 where previously reviewed in previous IDS documents.

The references of the IDS filed June 30, 2009 disclose electronic noise suppressors with either a noise suppressing material on the surface of a resin material or uniformly blended in a binding agent. They do not teach or suggest a composite layer that consists of the binding agent and magnetic material and consists of a portion with binding agent and crystals of the magnetic material, a portion with binding agent only and a portion with binding agent and non-crystallized magnetic material.

Thus, it is clear that the references of the IDS filed June 30, 2009 do not disclose or suggest the present invention.

In light of the above, the present claims are passed to issue.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
